Running the Application with Docker

To run this, react application inside a Docker container, follow these steps:

1. **Build the Docker Image:**

   Open a terminal in the root of the project and run the following command to build the Docker image:

   docker build -t news-aggregator-website .

2. **Run the Docker Container**

   Once the image is built, run the container using:

   docker run -p 5173:80 news-aggregator-website

3. **Access the Application**

   Open your browser and navigate to http://localhost:5173 to see your application running.

4. **Stopping the Container**

   To stop the container, find the running container using:

   docker ps

   then stop using:

   docker stop <container-id>
